

HEALTHCARE INDUSTRY CASE STUDY

Akkadian Provisioning Manager

PROVISIONING AUTOMATION ENGINE

The industry standard.

Hospitals, medical device manufacturers and research facilities are coming to Akkadian Labs looking for Cisco UC provisioning solutions. Akkadian Provisioning Manager has become the solution of choice.

THE CHALLENGE

Requires 100+ hours, is unsecured and prone to mistakes.

A teaching hospital with 15,000 employees needed to free-up its engineers from time-consuming tasks so they could focus on important projects. Hundreds of weekly MAC-Ds required many provisioning hours and personnel. Numerous provisioners accessing the system was a security threat. Consistency was an issue-every provisioner has their own way of performing MAC-Ds.

THE SOLUTION

Akkadian Provisioning Manager makes MAC-Ds within Cisco UC a breeze.

Akkadian Provisioning Manager can provision a user with multiple devices and services in under 40 seconds. The solution offers customized permission levels, allowing role-based access that can be deployed in less than an hour.

THE RESULTS

Reduced time and resources. Simplified workflows and increased consistency.

After implementing Akkadian Provisioning Manager the highest level engineers no longer needed to perform MAC-D work. The IT helpdesk took on the provisioning tasks using Akkadian Provisioning Manager's simplified templates.
