Akkadian Provisioning Manager

Bulk Provisioning

Add or Delete Multiple Users and Devices as a Group

The bulk provisioning feature of Akkadian Provisioning Manager easily enables you to create or delete multiple users and devices from a single file. It significantly reduces the time and effort that would otherwise be required—no scripting involved. It’s an ideal tool for boosting productivity and ensuring that IT personnel can focus on the more strategic needs of your organization.

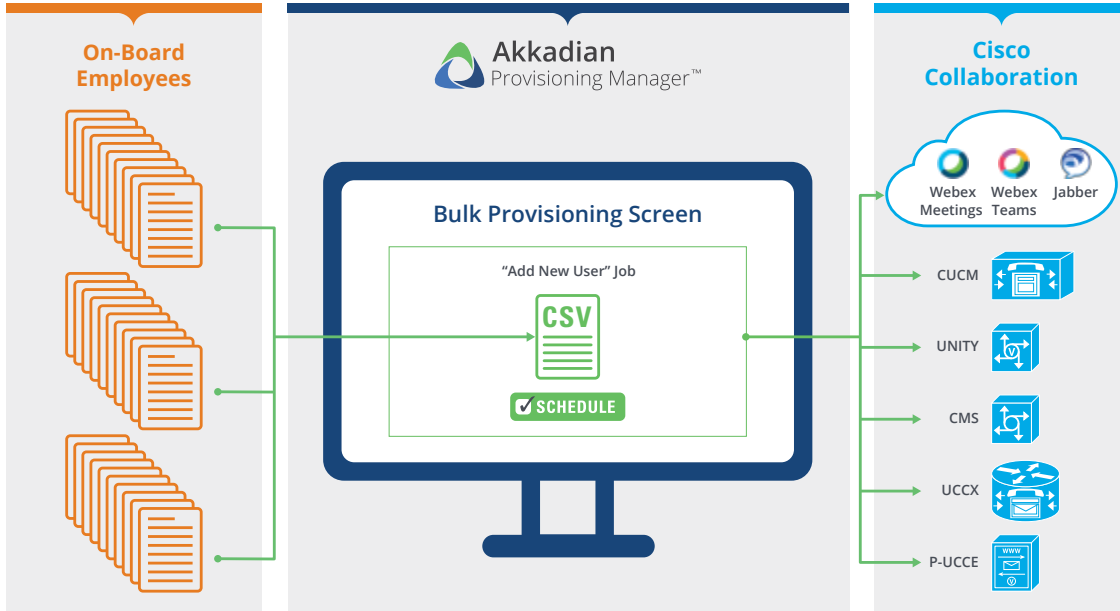

Capabilities:

- Supports 2 job types: Adds and Deletes
- Leverages existing jobs you’ve built in Provisioning Manager—no need for special configuration
- Easy to use—just drag over the job you want to run and download the CSV file
- Configure multiple Cisco Collaboration apps from a single CSV file
- Can use DN management – choose the appropriate DN pool to automatically select a number
- Schedule, or execute in real-time

Depending on the size of your bulk provisioning file and the number of UC applications you are provisioning, this may take some time to process. Rest assured that call processing in Cisco Unified Communications Manager (CUCM) will NOT be affected during bulk provisioning.

Use Cases

- Batch processing of employee new hires or separations
- Migrating new users to CUCM following a company acquisition
- Rolling out work-from-home UC applications during a crisis
- Automate the on-boarding and off-boarding of groups of temporary or seasonal employees

Step-by-step Process

On-board or off-board hundreds or thousands of employees in just a few simple steps:

1. From the **Actions** menu, select **Bulk Provision**
2. Select the **Job** from the list and drag it into the Bulk Provisioning window
3. Click **Download** the Job CSV
4. Add entries to the CSV
5. Click **Schedule**, or **Perform** in real-time

Check out the **Administration Guide** for more details.
